THE PROBLEM

Traditional Finance Excludes Most Token Holders

Centralized Control

Banks and traditional platforms control user funds, require KYC, and can freeze accounts at any time

Idle Assets

Token holders have no way to earn passive income on their crypto holdings without surrendering custody

Complex Interfaces

Existing DeFi platforms have steep learning curves with confusing APY calculations and hidden fees

THE SOLUTION

Decentralized Staking Made Simple

How It Works

A fully decentralized staking platform where users maintain custody of their tokens while earning rewards automatically through smart contracts.

Solidity 0.8.20   React + Ethers.js   OpenZeppelin

🔒 Non-Custodial
Smart contracts hold funds, no central authority can access or freeze assets

⚡ Real-Time Rewards
Earn rewards every second with transparent, on-chain calculations

🎯 Simple Interface
One-click MetaMask integration with clear APY display and easy claim process

🛡️ Security First
ReentrancyGuard, time locks, and pausable functions for maximum protection
